

Now here is something to smile about

(Immediate Dental Implants - teeth fixed in a day)

Do you have a dental problem such as a badly broken tooth, an abscess; failing crown or bridge, maybe you have suffered a trauma that is going to leave you with a gap?

Why not consider the next best thing to your natural teeth?

Following improvements to implants and utilising experience gained over many years, we are now in many cases able to offer you fixed tooth replacement in one day.

Immediate placement of an implant is a straight forward procedure and usually results in no more post discomfort than having the tooth extracted.

The procedure would be to place the implant directly into the socket after extracting the problem tooth or teeth enabling us to place a fixed crown or bridge immediately afterwards.

The advantages of this 'one stage implant' procedure are

- Reduces the overall cost to patient
- Less visits to the surgery
- Patient discomfort less than with conventional implants
- meets patients demands as you need never have an unsightly gap

If it is not possible to place immediate implants we would then look to the more conventional route of implant placement.
